

FORM 10-Q — QUARTERLY REPORT

NVIDIA CORPORATION — Q3 FISCAL YEAR 2025 (Period Ended October 27, 2024)

PART I. FINANCIAL INFORMATION

Item 1. Condensed Consolidated Statements of Operations (Unaudited)

The following table presents our condensed consolidated operating results for the three and nine months ended October 27, 2024 and October 29, 2023 (in millions, except per share data):

Financial Metric (in \$ Millions)	Three Months Ended Oct 27, 2024	Three Months Ended Oct 29, 2023	YoY Change (%)
Total Revenue	\$ 35,082	\$ 18,120	+94%
Cost of Revenue	\$ 8,913	\$ 4,720	+89%
Gross Profit (GAAP)	\$ 26,169	\$ 13,400	+95%
Gross Margin % (GAAP)	74.6 %	74.0 %	+60 bps
Research & Development (R&D)	\$ 3,390	\$ 2,294	+48%
Sales, General & Administrative	\$ 897	\$ 690	+30%
Operating Income	\$ 21,882	\$ 10,416	+110%
Net Income	\$ 19,309	\$ 9,243	+109%

Item 2. Management's Discussion and Analysis of Financial Condition — Revenue by Market Platform

We specialize in markets where our computing platforms accelerate enterprise workflows and generative AI. The following table summarizes revenue by specialized market platform:

Market Platform Segment	Q3 FY2025 Revenue	Q3 FY2024 Revenue	Primary Growth Drivers
Data Center	\$ 30,771 M	\$ 14,514 M	Hopper H100/H200 demand, InfiniBand Quantum-2 networks
Gaming & AI PC	\$ 3,279 M	\$ 2,856 M	GeForce RTX 40 Series GPUs, back-to-school shipments
Professional Visualization	\$ 486 M	\$ 416 M	Adoption of NVIDIA Omniverse, generative 3D workflows
Automotive & Robotics	\$ 449 M	\$ 261 M	NVIDIA DRIVE Orin adoption by autonomous vehicle OEMs
OEM & Other	\$ 97 M	\$ 73 M	Entry-level embedded compute platforms

Supply Chain and Blackwell Architecture Update

During the third quarter of fiscal year 2025, demand for our Hopper computing platform remained exceptional. We delivered 13,000 production samples of Blackwell architecture systems to customers including Microsoft, Oracle Cloud, and CoreWeave. Production ramps for GB200 NVL72 liquid-cooled racks are scheduled for Q4 FY2025. Our gross margin is expected to moderate slightly to the low-70s range during the initial Blackwell production ramp, before recovering to mid-70s levels as manufacturing efficiencies at TSMC mature.

Risk Factors — Export Controls and Foundry Concentration

Our business depends critically on independent foundries, primarily Taiwan Semiconductor Manufacturing Company (TSMC), for wafer fabrication and advanced packaging (CoWoS). Any geopolitical disruption in the Taiwan Strait would severely impair our ability to supply GPU accelerators. Furthermore, United States Department of Commerce export controls continue to restrict shipments of advanced computing chips (including modified A800 and H800 architectures) to the People's Republic of China, capping China's Data Center revenue contribution at mid-single digit percentages.
